

HTM Shiftlight's Benefits (EN)

Indicating optimal shifting points without looking at the rev counter.

In high performance or track use, It helps to shift at an rpm where your car has the optimal point for the next gear.

In daily drive, It helps to reduce fuel consumption.

HTM Shiftlight Features(EN)

OBD port powered, plug and play Shiftlight.

Doesn't require any permanent modification on the vehicle.

It has 3 Fully Customizable Drive Modes (Eco-Sport-Race).

Mode Change and Brightness Adjustment (Day-Night) can be done by built-in switch.

The electric consumption starts with the moment when the ignition is on. Automatically goes into sleep mode when the ignition is off.

To turn off completely, the switch on OBD Box can be used.

High Quality, fully nature-friendly, bio-degradable 3D Printed and Painted Cases. Standart color is Matte Black, for other colors please get in contact).

HTM Shiftlight's User Manual (EN)

Greeting mode will take place after a 120 seconds engine stop. Due to the vehicles which have start-stop function, greeting mode set to this threshold.

With the button on the left side of Shiftlight, mode information will be shown to the user by a single click (Green-Eco, Yellow-Sport, Red-Race). After the flash of LEDs, if the button clicked one more time in 3 seconds, the mode will switch to the next driving mode. Shiftlight has a memory which remembers the last mode the user was in. Every time the car started, Shiftlight opens in the last mode.

If the button long clicked for 3 seconds, LEDs brightness will be changed between Day and Night mode. Each time the car starts, brightness will return to the default setting which is Bright-Day mode.
